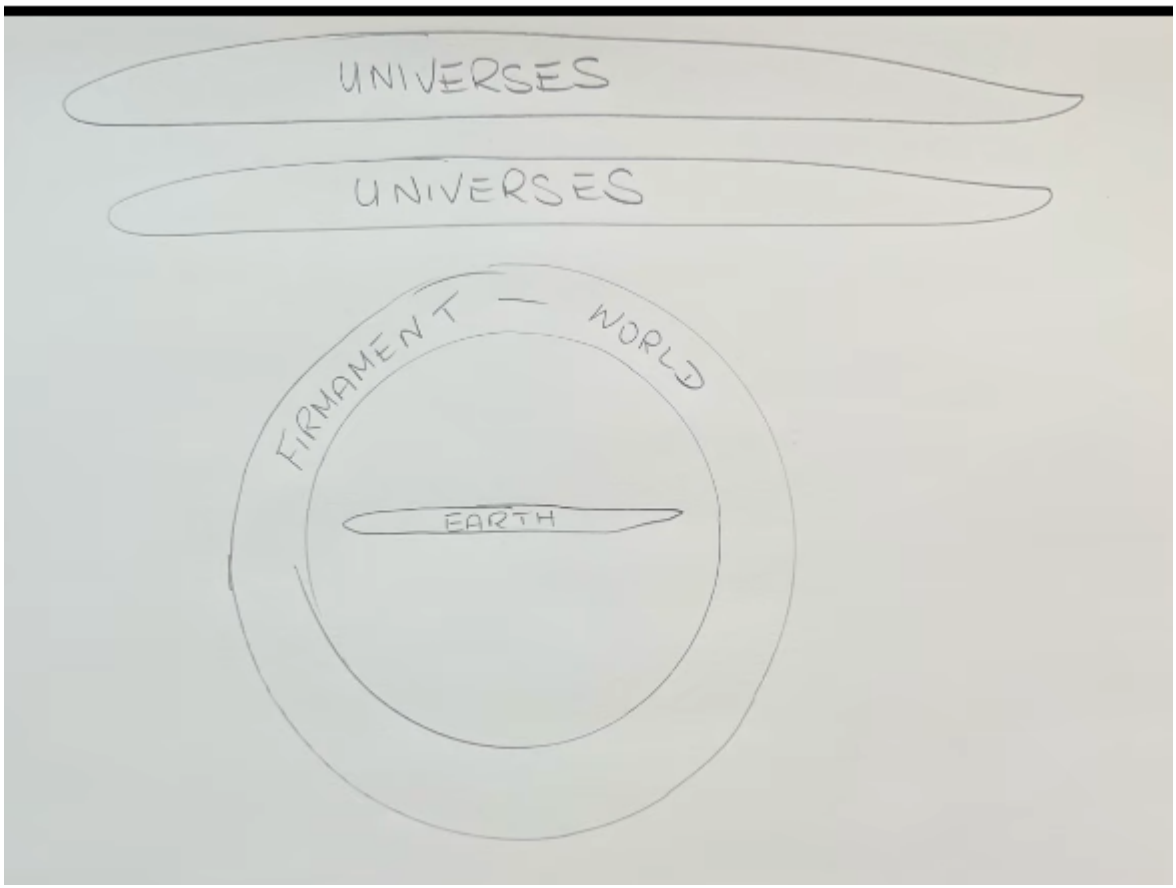
Transcript

Hello everyone. Thank you for joining me today.
I've been working on the Flat Earth theory after a number of people had asked me about this a number of times and as I had said previously, it wasn't really something I had a great interest in, but I started to look at it and I've had a lot of information sent to me and I've tried to keep it very simple today so we get a basic understanding and it may help us to understand why Elon Musk is saying that he can't move a SpaceX rocket through the firmament. So today I'm going to look at you know is Earth flat or round is there a firmament and what is it? Is there something beyond the firmament and why would Elon Musk be saying that he can't get a SpaceX rocket into or beyond the firmament? So, I'm going to be covering those subjects today and I hope you really enjoy it and let's just get started.

So, the first question is the world or the Earth is it flat? And what they said to me was that the world is round, but the Earth is flat.
And I said, "**So do you mean that planet Earth is flat?"** And they said, "Yes."
And I said, "**So what is the difference between the world and planet Earth?**" You should make this distinction between round and flat. They said to me that “The world is an entire concept which embodies many layers, dimensions and levels of consciousness and that Earth is a layer within the concept of the world.”
So I reworded the question. **So Earth is within the concept of the world**? and they said “Not exactly, Earth is a layer within many worlds.”
So I said to them **So when you say world do you mean universe or universes?** and they said “No universes encompass the worlds or the world.” So if you look at this diagram, it seems to be showing that you've got Earth as a flat layer within a circle. They're calling the circle the world. and the flat layer Earth. And then what you've got around that are the universes or the universe or whatever you understand to be true. So this for me was new information very interesting. I don't really know how to question that any further. So if anybody knows how we could question that in more detail because it's the way that questions are presented in channeling is how the answer is reflected. So if anybody has any more ideas on how I could ask about the difference between the universe, the world and the Earth then please write them below or email me at my website which is goldenheavenonearth.net.
So also as you can see on my diagram here they did include something called a firmament.



So then I asked them, "**So is there a rim around Earth called the firmament?**" And they said, "No." They said, "The firmament is the layer of protection around the world."

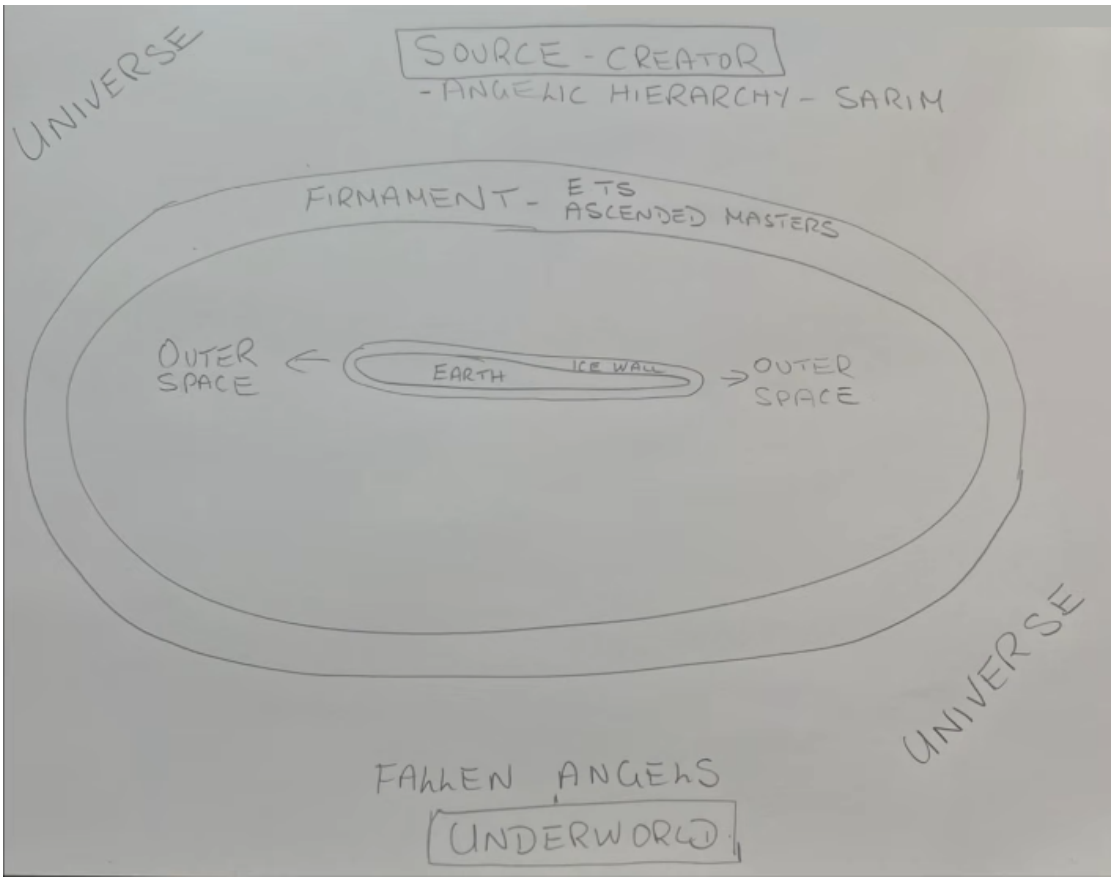
So what is the firmament? They said that “The firmament is the energetic glue that keeps the package of Earth contained within each world.”

And I said, "**So are you saying that the way we are energetically set up on Earth is duplicated elsewhere?**" And they said, "In some cases, yes, but mostly this setup of round and flat with outer packaging is quite unique in our understanding of the universe." So I said, "**So in our diagram, is this an example of what falls within this universe?**" And they said, "No, a universe consists of other elements, not just the world and the Earth."

So I said, "**So what are the other elements?**" They said “In a universe there are macro and micro components. Some you can see like land masses and those that you can't see like microorganisms or air for example.”

So then I said **So why does Musk say that I can't get past the firmament? So he's been talking about how SpaceX aren't able to get past it.** So they said to me that “The firmament is the packaging they give to hold each universe into position anatomically.”
And I said, "**So what would happen if you say ruptured the firmament?**" And they said “You cannot rupture the firmament because it immediately reassembles and repairs itself. So then I asked them **In this concept of world and Earth and universe and firmament where is God or consciousness?** So they said to me that “God and consciousness or grand design is both within the structures that we've just mentioned world Earth universe and firmament, but it's also above those structures. You need the grand design on both sides to hold it all together.”
So I said **Inside and outside are they opposing forces?** and they said “No, they are forces that are complimentary and mutable.“
So I said **So if Earth is flat then is outer space the outside of this flat setup**? and they said “Yes.”
And I said, "**So outer space is not above the Earth?**" And they said, "No."
So what they seem to be explaining is that we have a Flat Earth and that anything to the sides of it are actually the outer space. So the outer space is not above it's more around. So if this is my understanding. So if the Earth is flat then anything around it would be the outer space and then it would seem that you have a layer which encompasses all of these all of that things you can see things you can't see which somehow anatomically holds it all together and as it's all held together that's called the world and that the world is then surrounded by these concepts called universes or universi.
So then I said **So when flying in an airplane or in a spacecraft why does Earth appear round?** They said that “Only the world appears round as an entire concept. The Earth is actually flat. So I said, "**So the ice wall is the perimeter that divides us from outer space.**" And they said, "Yes."
And then I said, "**So ETs like Syrians, Pleiadians, Lyrians, are they in outer space or are they beyond the firmament?**" And they

said “Both.”
And I said, **"Can you please explain?"** And they said that “Some beings reside in outer space, which is beyond the ice wall.”
So you've got your Flat Earth and then you've got ice around the Flat Earth and beyond that, they're calling that the outer space and they're saying that some beings reside in other dimensions either within the firmament or beyond it. And they said that beyond could also mean in other galaxies or universi.
So I said “**Is consciousness different in outer space? Is it different to say another universe or a galaxy?** They said “In some cases, yes, but most levels of consciousness can be achieved in both locations.”
I said “**So beings that are channeled as angels who vibrationally are beings of unconditional love, where did they reside based on this analogy that we have so far?** So then they gave me this drawing here.

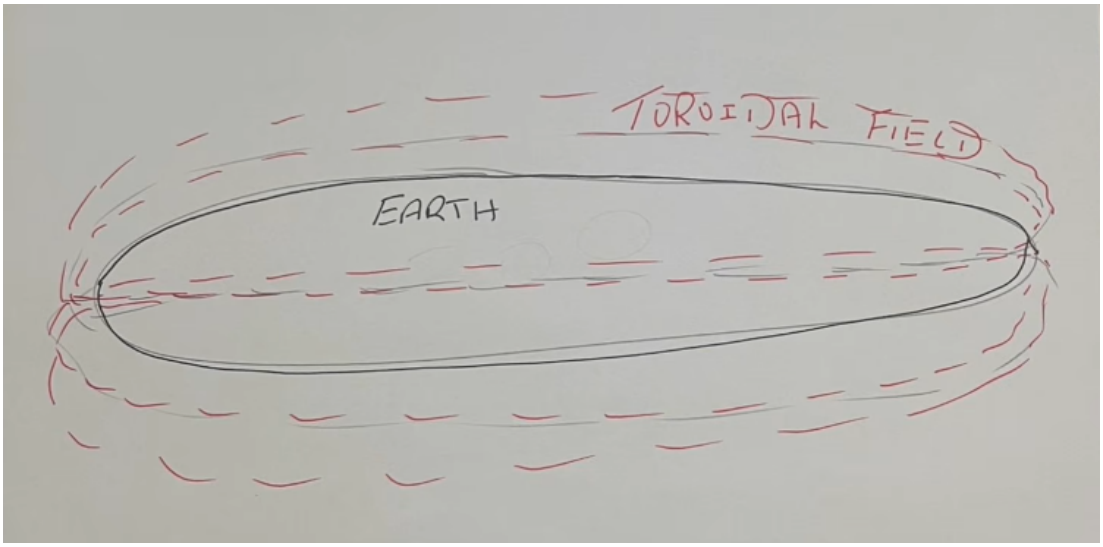


So if we start in the center we have Flat Earth and then around it we have this ice wall and then we have beyond that what they're calling the outer space. It's not above us, it's beyond the ice wall and that when you put all that together they're calling that a universe. And then above that you've got beings like ascended masters which are again still in or within the firmament. And then above that you've got the god or grand design and the angelic hierarchy to the other side of it still within the universe.
They're showing that there are beings of the underworld which they're calling fallen and that could include say a fallen angel. So that again looks like it's outside of the firmament.
So then then I asked them **Is it possible to break or damage the firmament?** They said to me that “The firmament is self-healing like a gel or a plasma and that as objects pass through it, it parts easily, but then it closes behind the moving object and it's kind of like a healing sheath that holds in the frequency of life and helps to maintain homeostasis.
It's a living, breathing coat of protection.”
And I said, "**So what is the frequency of life?**" because they said that this healing sheath holds in the frequency of life. I said, "**So what is the frequency of life?**" And they said to me, "It's love."
So I said, "**So the firmament is holding the planet in the spiritual frequency of love.** And they said, “Yes.”
And I said **Is the frequency above the firmament different?** And they said “Yes, above the firmament are other layers and they are also self-healing layers which hold different frequencies as you go further out. And in spiritual terms, this could be labeled as dimensions or spiritual dimensions. And that above these layers of firmament or dimensions is access to the creator, the God or Source.”
So I said, “**Is the firmament and its various layers made up of oxygen?** And they said “Only when it's near to the Earth's surface. The other layers are made up of different materials, gases, frequencies and elements.”

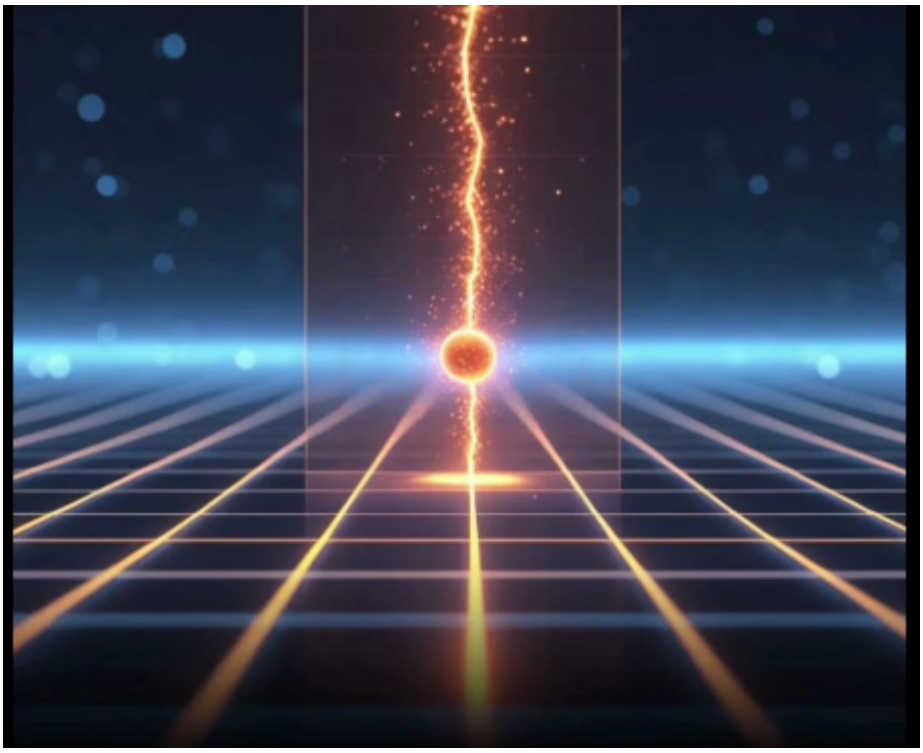
So I said, "**Is the firmament also ozone?**" And they said, "No." They said, "The ozone or atmospheric layers are below the firmament?"
I said, "**Is the firmament the tunnel people start to pass through during say a near-death experience?"** They said “Yes, it can be depending on how long the person is outside of their body and what the soul needs to know for its divine mission and that people experience different layers of the firmament based on what the soul needs to know for this divine mission.”
So I said **So the firmament could also translate into like a spiritual hierarchy?** And they said “Once you reach the vibration of unconditional love you have gone beyond the firmament.”
So what I think they're trying to explain to us here as in the previous diagram you have Flat Earth and then above it or around it holding it all together is the firmament. But the firmament has layers and they're saying that as you go through these layers or how far you go through these layers in a near death experience depends on what your soul needs to gather during that experience of going through and so it would appear that the layers of the firmament, the further you go out, the higher a frequency they are or purer that they have pure frequency, which is of a higher spiritual resonance.
So for example, God and the angels would be outside of the firmament. They would be above it, beyond it because they are the purest source of love. They have no ego. They're a different frequency. And then it would seem that the layers of the firmament represent the layers of spiritual hierarchy.
So for example in the firmament as you go through you might meet beings from the galactic federation or ETs. And then as you go up and through to a higher resonance again, you might meet people from the great white brotherhood who are the ascended masters like Lord Maitreya and Lord Kathumi. I mean there are there are many ascended masters and as you go through it would suggest that as you go up through the firmament the finer the vibration and frequency becomes. And so you meet different types of beings as you go through the firmament. As you reach the other side of the firmament and you break through into the next level, you are now in a space called God where the angels reside. So they're saying that

once you reach the vibration of unconditional love, you have gone beyond the firmament.
So I said, "**So when you've gone beyond the firmament, are you now in the vibration that some people might call heaven?"** And they said, "Yes."
And I said, "**Is this also the place that people call Shambala?**" And they said, "No, Shambala resides at the dimensions of the ascended masters." So it would seem that Shambala is within the firmament.
So I wanted to know **Could a quantum physicist see these different layers of the firmament and then be able to equate them to a scientific equation which was different at each layer.** And they said “Yes that all spiritual dimensions have a scientific counterpart or equation. that they said the spiritual essence came before scientific interpretation and that scientific interpretation is just another way to experience or understand life.
So I said, "**So the firmament could be likened to like a spiritual school or a pool of spiritual learning.**" And they said, "Exactly."
And I said, "**So when Trump announced something called the Golden Dome, does this also have significance to say spiritual disclosure of the of this firmament?**" And they said not just the firmament, but disclosure in general towards people understanding that all things are essentially spiritual in nature or essence. And this is where we get the label as above so below. As above so below means that as things are in heaven is what God wants for you on Earth. So if God is an unconditionally loving being, he wants the same for you wherever you reside in whatever frequency you reside on Earth. He wants for you or what the energy of God wants for you is for you to experience or move towards the frequency of unconditional love. What God wishes for you in heaven is reflected below on Earth. And that's where the saying comes as above so below.
So I said **Is the ocean classed as the outer space in the context of Earth being flat?** And they said “Yes.”
So I said **If Earth is flat where does the toroidal field enter and exit?** So they drew me this diagram showing that this is the Flat

Earth and inside of it, it's hollow and that the toroidal field flows through that hollow part of this Earth. So you've got a top bit and a bottom bit.



So then I came across this article about quantum tunneling and in the article they're saying that scientists have captured for the first time ever an image of quantum tunneling.



Quantum tunneling is a phenomenon where particles pass through barriers that they shouldn't be able to and it's showing that somebody seems to have been able to capture an image of that and that it's saying that they used a cutting edge at a second microscope and that researchers captured electrons appearing on the far side of a barrier without crossing it in any classical sense and that this isn't just visualization.

> Scientists Capture the First Ever Image of Quantum Tunneling
>
> Quantum tunneling—the bizarre phenomenon where particles pass through barriers they shouldn't—has finally been directly imaged for the first time by physicists in Canada.
>
> Using a cutting-edge attosecond microscope (one quintillionth of a second resolution), researchers captured electrons appearing on the far side of a barrier without crossing it in any classical sense.
>
> This isn't just visualization—it's insight into how the universe works on the subatomic level. Quantum tunneling powers nuclear fusion in stars and is the basis of modern electronics like flash memory.
>
> But until now, it's only been theory and indirect measurement. This image confirms that particles really do vanish and reappear in violation of classical physics.
>
> It's one of the most mysterious tricks of the quantum world—finally caught in the act.

It's insight into how the universe works on the subatomic level. And that quantum tunneling powers nuclear fusion in stars and is the basis of modern electronics like flash memory. But until now, it had only been a theory and indirect measurement, and that this image confirms that particles really do vanish and then reappear in violation of classical physics. And it's one of the most mysterious tricks of the

quantum world, which they finally caught in the act. So because that information is actually quite difficult to understand unless you're a quantum physicist, I wanted to get a simpler answer to that question. I wanted to get a simpler explanation so that we could all understand.

So I said, "**What is quantum tunneling?**" And they said to me that "It is the process of moving through the firmament using vibration and sound which will need to be adjusted to go through its different layers because it's a spiritual hierarchy. So we have Flat Earth and then we have the firmament above it which is a layer and within that layer are other layers of different frequency and that's and that as a package is called the world.

So what they're saying is that the firmament which is a layer which packages everything and holds everything into position is has different frequency within it. As you go further out the frequency changes and they're saying that quantum tunneling is the process of moving through that layer based on vibration and sound.

And they're calling it this layer something which has a spiritual hierarchy, meaning that as you go through the vibration, the spiritual vibration, the spiritual frequency changes as you go through the firmament.

And I said, **So is this why Musk says that he can't get SpaceX through the firmament?** and they said "Yes, it's because the frequency, the vibration and the sound is not compatible or allowed into the firmament in its current design and that if vehicles and transport could travel with different light, frequency, and sound, then it could pass through certain layers of the firmament."

So this is very interesting. So what they seem to be explaining is the density of a SpaceX rocket is not compatible with the firmament. The vibration of it perhaps is too dense. This is just my interpretation. I don't know this for certain. But what they're saying is that if you could create a vehicle or a way to move through the firmament where the vehicle was of different frequency, sound, vibration or density, then it could actually go through that firmament.

So maybe what Musk is explaining is that in its current form, the SpaceX vehicles are not designed to go through that spiritual

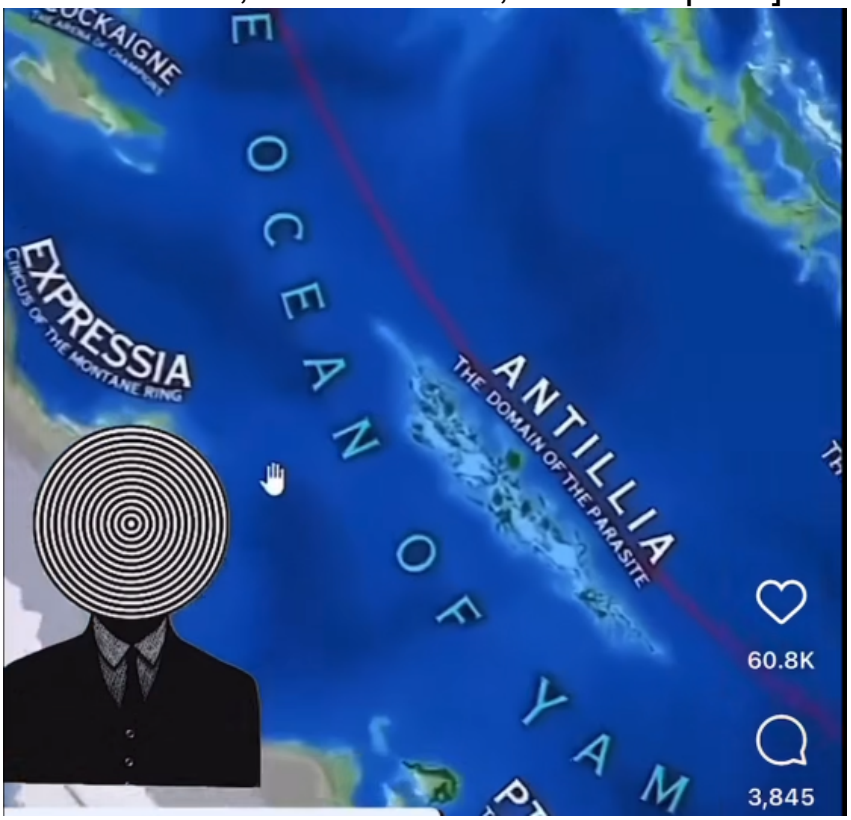
hierarchy because the density of their light and sound is too heavy to go through to be able to pass through.

I said, "**If Earth is flat, where does the weather come from?**" And they said “In its natural state without any manipulation weather is carried on the waves and energies and vortices of the toroidal waves.” So as we saw before the toroidal waves go through the center of the of the Flat Earth and then they come they travel around in a donut shape.
I said, "**Is the firmament a simulation or is it actually real?**" They said to me that “The firmament discussed today is real, but it is possible to overlay a visual in front of the firmament and it is possible that phenomena in the sky or what we perceive to be the sky is manipulated by Earth personnel and galactic personnel.”
I said **Is there an energy grid beyond the firmament?** They said “Beyond the firmament is just pure love, enlightenment and oneness.”
So I found this subject quite interesting, but also quite complicated to understand. I'm still not sure that I had all the right angles or questions in order to get the information that we actually really need. I'd be interested to hear from you all what you think about what I found today and see if there's anything further that we can ask to get the information more concise. So obviously I've channeled just a very simplified version of what could be happening and if you have any further questions or information since seeing this video, please do send it to me because I will still keep looking at this subject because it seems to be a very big subject and it and to be honest, it's something I don't really normally think about.
What I was very interested in hearing in my channeling was how the firmament has a spiritual vibration and how this vibration changes and becomes finer and purer as you travel through it. And that that is why SpaceX at this moment in time are saying they can't travel through the firmament because they don't have the correct vehicle in order to go through it and in order to do quantum tunneling through

this firmament, there would need to be a change in the frequency, the vibration, the sound, and the light of any vehicle that they tried to use to pass through that layer.
What I also found interesting was that they were saying that the firmament was the layer where the ascended masters and the ETs and other phenomena related to spiritual development reside. But that God and the angels were above that layer. They're above the firmament. Once you go beyond the firmament, you're in an existence of pure unconditional love.
So, I hope you've really enjoyed this channeling today and I look forward to seeing your comments and to receiving any further information from you all. And I'll see you all next time. Bye for now.

[Appended VIDEO CLIP, Male voice, 29:40m timepoint]
Have you ever heard about the court case that took place Flat Earth versus Globe Earth in 2019? There were two fellas that went to court for a civil case for some money. It was about like $10,000. This is the docket ticket for the court case and it was Globe Earth vs Flat Earth. [Wm Thompson vs Zen Garcia Case 2019 MV-1104 Barrow County, GA]
And whoever won the case would win the money. Well, after the case, which wasn't very long, both of the gentlemen showed all of their evidence. And who do you think won the court case? Who would you think won? You would imagine Globe wins, right? Because science tells us we live on a globe and everyone tells us we live on a globe. I mean, that's what we were taught. So, wouldn't Globe win in court? That's what I would think. But that's not what happened at all. Actually, Globe lost and Flat Earth won because the judge said there was zero evidence to prove that the globe was a thing and the Flat Earth actually won the case. Now, the Globe guy got very mad and this is a true story. So, the Globe guy got pissed off about it and he went back to court and they tried this case again. You'll never guess what happened. Oh, maybe you will. Globe lost again for the second time. So my question is, if you can take this to court and court can tell you that globe is BS and Flat Earth wins, then how are we not putting two and two together here?

[Appended VIDEO CLIP, Female voice, 31m timepoint]



[Maps and ice wall footage?]
My 80-year-old grandpa casually mentioned seeing the ice wall the other day and you guys are going to freak out. My grandpa is one of those people where like he's just lived way more lives than the rest of us. Like he was in Vietnam, he was in the Navy, he was doing all kinds of stuff. Like you could mention anything and he's done it or seen it or knows about it. It's to the point where my family just kind of like shrugs him off and is like, "Okay, Pop. Yeah, sure." Because some of the stories are a little bit out there. Well, we were having dinner the other night and he casually mentioned the ice wall. And normally I like wouldn't give a second thought to the things that he said. I kind of I feel bad saying this cuz I love him to death, but I would like tune him out a little bit because I'm like, "Okay, he's old. Like I don't know what he's talking about." You know what I mean? But he mentioned the ice wall, so I start talking to him about it. He was in the Navy. And this came up because we were talking about how I went to Iceland and he started like a side conversation with

someone else about it. He said that when he was in the Navy, they would go up towards the Arctic Circle, basically comes down to I want to say he said like Africa and then like up the coast to come up the east coast of the US. So he just casually mentions that you can't go near the ice wall and I'm like the ice wall? What do you mean? So I pull up the 1585 I think it is Gleon map like the Flat Earth one and I was like did you guys like take this route and I started like at the top and basically just went around the side like where the ice wall would be, but I didn't use one that had an ice wall on it cuz I wanted to gauge his response.

He's like “Oh yeah we had a map like that on the ship” And I'm like oh okay and like what were you doing? He's like oh I was on the NATO route.

I said the NATO route? What are you talking about? He's like, "We watched the shorelines and we watched to make sure that planes weren't invading other countries." I'm like, "What?" Like, that doesn't even sound right. He goes on to say that the ice wall is just because the Arctic Circle extends so far down that it appears to create a wall around all of those continents.

And I said, "So, did you like see the wall yourself? Like, what does it look like?" He said when they start up near the Arctic Circle, you could see it really far away. And they were told that it was about 50 feet higher than the water.

And I said, "Well, how like why didn't you guys ever get close?" He said because it would create like a titanic type of instance where like the ice would scrape the ship because he said for a certain distance up until the ice wall, the ice comes so high up that like you can't even sail a ship on it because it would just scrape and destroy the bottom. So I explained to him how we know that the Earth is flat and like that the ice wall is the bottom of the firmament and everything. He literally thought that I was crazy. He's like, "What? No, Kayla, we live on a globe. Like, what are you talking about? He genuinely like was acting like I had lost my mind. Like, it just didn't make sense to him that I was saying that it's actually a nice wall. It's not an extension of the Arctic Circle somehow and that it means that we live on a Flat Earth.

But he just like vehemently denied this. Like, he just it didn't even seem like he was trying to hide anything. He just genuinely did not believe me. But what I'm thinking is that my grandpa was part of guarding the ice wall at one point and he has no idea. He denies this because why is it called the NATO route and why are they watching to see who's in the ocean and they're like doing you know what I'm saying? Like they're going around the outside of the Gleon map to protect coastlines.
Like I get that that's what the Navy does, but I genuinely think that this is how they guard the ice wall is that they have the people doing it, so clueless that they don't even know. My grandpa was unknowingly guarding the cosmic secrets of the universe.
He doesn't even think it's weird that the Arctic Circle would extend all the way down like that. And it makes me realize that the Arctic Circle that they're talking about is probably just the circle of the ice wall. And now I'm like, man, like I wish that I paid attention to my grandpa all of these years because what else has he said? Like what has he said casually that nobody listens to?
